DESCRIPTORS College Graduates; Doctoral Degrees; *Educational Trends; *Elementary Education; Enrollment; *Futures (of Society); *Higher Education; High School Graduates; Masters Degrees; Population Growth; *Prediction; Research Methodology; Sex Differences; Trend Analysis

ABSTRACT

Every year the National Center for Education Statistics publishes this pocket summary of projections of education statistics. These brief tables give a sampling of what is expected over the next decade, summarizing the complete book, "Projections of Education Statistics to 2005." It is expected that the population of persons aged 5 to 13 years will increase by 2005 by about 11%. The total enrollment in elementary and secondary education is expected to grow by about 14% from the 1993-94 figure of 48,824,000, with the greatest increases coming during the high school years. The projected high school enrollment by the year 2005, 15,985,000, is about 21% above that of 1993-94. High school graduates are expected to rise proportionately, as are the numbers of teachers. Expenditures for elementary and secondary education are expected to increase at an even greater rate, with the projected figure for 2005 anticipated to be 33% above that of 1993-94. Enrollment in higher education is expected to increase by 8% by 2005. While a slight increase is anticipated in the numbers of women receiving advanced degrees, the absolute numbers of men earning master's and doctor's degrees are expected to decline. Technical notes explain the projection methodology. (SLD)

Each year, the National Center for Education Statistics (NCES) of the U.S. Department of Education publishes this pocket summary of projections of education statistics.

The following tables give a sampling of what will happen over the next decade. But there is far more you can learn.

The complete book ***Projections of Education Statistics to 2005*** provides the reader with NCES information on projected enrollment at all education levels; numbers of high school graduates, earned degrees conferred, and classroom teachers; and expenditures of public elementary and secondary schools as well as of institutions of higher education. In addition, there are some supplementary tables from other sources.

The book takes a look at topics such as

- What is going to happen to education in the next 10 years?
- How many students will be in school at every level?
- Is the average age of college students going to continue to rise?
- Should communities build schools or wait?

To receive a copy of the 200-page ***Projections of Education Statistics to 2005***, see the ordering information at the end of this booklet.

U.S. Department of Education material in this booklet is in the public domain. Authorization to reproduce Department of Education material in whole or in part is granted.

Technical Notes

General Projection Methodology

Beginning with institutional data from the National Center for Education Statistics (NCES) and demographic data and projections from the Bureau of the Census, total enrollment is projected using expected enrollment rates. Exponential smoothing and multiple linear regression are the two major projection techniques used to forecast these rates. Demographic assumptions used by NCES are consistent with Bureau of the Census middle series of population projections. Elementary and secondary expenditure projections are produced using multiple linear regression.

For methodological details on the assumptions and methods used to develop these projections, and details on data sources, see *Projections of Education Statistics to 2005*.

—Percentage not calculated.

¹Population projections are from the middle series of population projections of the Bureau of the Census. Population data for 1993-94 are projected.

²Data for 1982-83 are estimated.

³Based on enrollment by organizational level.

⁴Excludes capital outlay and interest.

NOTE: Because of rounding, details may not add to totals. Percentages are based on unrounded numbers.
